

Certified in Risk and Information Systems Control – CRISC

Description

Discover CRISC

The CRISC training focuses on the four domains of the CRISC (Certified in Risk and Information Systems Control) exam, which include recognizing IT risks, assessing these risks, implementing means to mitigate or reduce them, and monitoring and communicating controls and risks. It is also designed to provide the necessary skills to obtain the CRISC certification.

We prepare you for the CRISC certification

This 4-day training supports and effectively prepares you to take the CRISC – Certified Risk and Information System Control exam. This course will cover, among other things, IT risk identification and assessment, response planning, and finally, how to monitor and evaluate the quality of controls.
