

DevOps Product Owner – DASA

Description

A key role in maximizing product value

The DevOps Product Owner plays a central role in managing the product lifecycle. Their mission is to ensure the highest possible value while balancing a wide range of requirements. These responsibilities include both delivering new features and maintaining existing releases. This role requires clear communication with diverse teams and numerous internal and external stakeholders.

This DevOps training highlights the essential skills needed to meet these challenges. It builds on the foundations of agility and the Scrum framework, enhanced by DevOps culture. It is designed for both experienced Product Owners and professionals who want to expand their skills in a context where development and operations are closely connected. Each module combines theory and practice to strengthen knowledge and provide a concrete vision of the role.

A recognized and practice-oriented certification

The DASA certification provides strong recognition for participants. It extends traditional agile practices to address the complexity of modern environments. The program covers strategic topics such as backlog management, prioritization of requests, and interaction with multiple stakeholders. Each aspect is designed to prepare professionals to effectively meet the real needs of organizations.
