

TOGAF – Enterprise Architecture Foundation et Practitioner

Description

Training TOGAF – Enterprise Architecture Foundation et Practitioner is presented as an industry-independent standard, serving as a reference base for the development and maintenance of enterprise architecture. TOGAF is primarily an “open” and standard methodology, compatible with major management frameworks (COBIT® 5, ITIL®, PMI®, Prince2®, etc.). For service providers and tool vendors, it serves as a recognized reference base, enabling them to highlight and certify the quality of their deliverables’ production.

Holders of such a certification can validate their knowledge of the terminology, structure, and basic concepts of TOGAF, as well as their understanding of enterprise architecture principles.

Course Content

Part 1 - Foundation (3 days)

- Module 1: Introduction
- Module 2: Basic Concepts
- Module 3: Core Concepts
- Module 4: General Definitions
- Module 5: Introduction to ADM
- Module 6: Enterprise Continuum and Tools
- Module 7: ADM Phases Level 1
- Module 8: ADM Guidelines and Techniques
- Module 9: Architecture Governance
- Module 10: Views, Viewpoints and Stakeholders
- Module 11: Building Blocks
- Module 12: ADM Deliverables
- Module 13: TOGAF Level 1 Reference Models
- Module 14: Summary

Part 2 - Practitioner (2 days)

- Module 1: TOGAF Leader's Guide to Establishing and Evolving an Enterprise Architecture Capability
- Module 2: Practical Approach to Developing an Enterprise Architecture Using TOGAF's ADM Method
- Module 3: Promoting Enterprise Agility
- Module 4: Business Models

- Module 5: Business Capabilities
- Module 6: Business Scenarios
- Module 7: Information Mapping
- Module 8: Organizational Mapping
- Module 9: Value Stream
- Module 10: Integrating Risk and Security within a TOGAF Enterprise Architecture
- Module 11: Using the TOGAF Standard in the Digital Enterprise

Documentation

- Digital courseware included

Exam

- TOGAF Enterprise Architecture Part 1 and Part 2 exams included in the course price

Participant profiles

- Professionals in architectural roles
- Enterprise architects
- Participants interested in TOGAF certification
- Candidates for the TOGAF Enterprise Architecture Practitioner course

Prerequisites

- Have basic experience in IT systems planning and development
- Have experience in IT service architecture
- Have attended or master the concepts included in the following course: [COBIT® 2019 Foundation](#)

Objectives

- Understand the basics of enterprise architecture and the standard TOGAF Edition 10 approach
- Gain a good mastery of the structure of the TOGAF standard as well as the use of its various components
- Grasp the Architecture Development Method (ADM) and its implementation
- Master in detail the phases and techniques defined in the Architecture Development Method (ADM)
- Be able to lead the transformation process proposed by the TOGAF
